

Deliverable 2

Team: Yanzheng(Dexter) Wu, Guo-Yi Jenny Wong, Luisa Watkins, Kejia Wu

Form: as a (persona), I want to (what) in order to (Why)

User case 1: As a user, I want to get a notice when I uploaded the improper photo (e.g. not a human face, photo not clear enough, mosaic photo, etc.) so that I can know the reason for the result when the algorithm did not yield the correct output.

User case 2:

As a login user, after I have successfully uploaded my photos, I would like to have buttons such as Reupload and Continue so that if I have accidentally uploaded wrong images they could click Reupload to re-import the image and click the Continue if I wish to start the analysis of the imported image.

User case 3: As a user, I want to have buttons such as Upload on the product main page, Exit so that I may import my selfie image through the upload button and exit the application through the exit button.

User case 4: As a user, I want to respect the user's privacy and only save the inputted face image locally until satisfaction is reached, and then promptly delete it from the system.

User case 5: As a user, I want my login information as a single string input to be stored within the database so that in the future I do not have to type everything to the system again.
